LABELTAG

LabelTag is an easy and convenient way to create a unique visible label on the data side of a DVD+/-R disc.

LabelTag works with all standard DVD±R discs. There is no special media required.

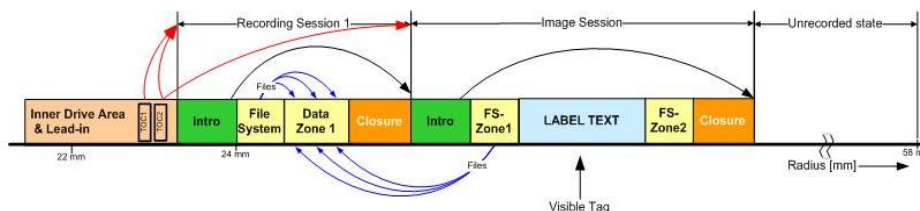

The label is created as part of the recording process, and burn simultaneously with the data. It is fast and the label will not fade or peel off.

LabelTag makes optimum use of the free discs surface. A label is located direct behind the data.

LabelTag is a quick and professional method to *serialize* or *personalize* each recorded DVD.

dotC introduced the **LabelTag** as additional feature on its customized iHAS220 Lite-On 20x DVD writer.

| | |
|----------------------------------|---|
| Disc types | DVD+/-R single layer |
| Supported media | All brands |
